

Project Phase 1 Solution ¹

February 14, 2018

Phase 1: Solution (note that it is possible that another proper design might differ slightly from this particular design)

1.a The ER; See the figure below.

1.b The relational schema. See the schemas below:

UU(login char[30] primary key, name varchar[40], ...);

UD(login char[30] primary key, name varchar[40], ..., photo blob);

UC(vin int primary key, category varchar[50], ..., login foreign key references UD NOT NULL);

Period(pid int primary key, fromHour int, toHour int);

Available(login, pid primary key, login foreign key references UD, pid foreign key references Period);

Reserve(login, vin, pid primary key, cost int, date time, login foreign key references UU, vin foreign key references UC, pid foreign key references Period);

Ride(rid primary key, cost int, date time, login foreign key references UU NOT NULL, vin foreign key references UC NOT NULL, fromHour int, toHour int);

Trust(login1, login2 primary key, isTrusted boolean, login1 foreign key references UU, login2 foreign key references UU);

Feedback(fid int primary key, ..., text char[100], fbdate date, vin foreign key references UC NOT NULL, login foreign key references UU NOT NULL)

Rates(login, fid primary key, rating char[20], login foreign key references UU, fid foreign key references feedback);

Favorites(vin, login primary key, fvdate date, vin foreign key references UC, login foreign key references Users)

Ctypes(tid int primary key, make char[50], model char[50])

IsCtypes(vin, tid primary key, vin foreign key references UC, tid foreign key references Ctypes)
